The use of aluminum has become more prevalent for automotive parts due to weight savings.

At Process Equipment we have installed systems for the cleaning and ageing of aluminum parts. This included the automatic loading, unloading and conveying of parts in sequence to the required work cells.

If our expertise is of interest we would be pleased to meet with your engineering team.

Process Equipment also fabricates:

- Curing Ovens
- Conveyorized Ovens
- High Temperature Annealing Ovens (up to 1400 C)
- Industrial Process Washers
- Powder Painting Enclosures
